

---

XXXXXXXXXXXXXXXXX In this article I will talk about the best free apps for new users on an iPhone. The first app that I will go into detail about is a map called maps. Maps is a great app to have when you are in unfamiliar areas because it shows you where all the stores and restaurants near you are. It also shows traffic and different routes based on how long it would take to drive certain ways, or if there is bad weather in the area. I think this may be one of my favorite features because it helps if you're not sure which way to go and want some help making up your mind. If you are playing games on your iPhone, this is also a great app to have. Some of the games are very simple, others are very complex. The best thing is that they can all be downloaded free of charge. This app is called game center and it has the ability to take up to ten different games at once and play them against each other. The next feature I want to talk about is one that helps with music playback, iTunes. iTunes helps you organize your music into play lists so you don't have to keep looking through different folders for songs you want to listen to. It also has the option of creating play lists for yourself so you can easily see what music you're listening to at any given moment. The last feature that I want to tell you about is one that helps you keep track of your money. This is another app called money. When you download this app, it shows you exactly what your current balance is in all of your different accounts. It also gives the option to set up alerts for when an account has a certain amount in it, or tells you how much money is in there because you put certain amounts into the account each period of time. I think this app is very useful because it gives me the option to set things up for myself so I always know what my money is doing. I think this is a great article. It has given me some very good insight on some new apps that I can use on my iPhone.
